

Postdoctoral position:

Postdoctoral research position is available in the Ben-Shahar lab at Washington University in St. Louis, Department of Biology. The project is aimed at deciphering the role of chemosensory pathways in human airways and their possible involvement in the development and exacerbation of asthma. Work will include *in vitro* and *in vivo* studies of human and mouse airway cultures as well as mouse models of asthma.

The ideal candidate should have a strong background in at least one of these fields: immunology, molecular genetics, biochemistry, or cell biology. Experience with mammalian cell cultures and mouse work is preferred.

To be considered, please send CV and names of three references by email to Dr. Yehuda Ben-Shahar: benshahary@wustl.edu
